Census Household Definitions

*Utah Office of
Ethnic Affairs*
UNITY THROUGH DIVERSITY

Household

A household includes all the people who occupy a housing unit as their usual place of residence.

Household size

The total number of people living in a housing unit.

Household type and relationship

Households are classified by type according to the sex of the householder and the presence of relatives. Examples include: married-couple family; male householder, no wife present; female householder, no husband present; spouse (husband/wife); child; and other relatives.

Householder

The person, or one of the people, in whose name the home is owned, being bought, or rented.

If there is no such person present, any household member 15 years old and over can serve as the householder for the purposes of the census.

Two types of householders are distinguished: a family householder and a nonfamily householder. A family householder is a householder living with one or more people related to him or her by birth, marriage, or adoption. The householder and all people in the household related to him are family members. A nonfamily householder is a householder living alone or with nonrelatives only.

Census Notes

*Utah Office of
Ethnic Affairs*
UNITY THROUGH DIVERSITY

- Data are limited to the household population and exclude the population living in institutions, college dormitories and other group quarters.
- The number of householders does not necessarily equal the number of households because of differences in the weighting schemes for the population and occupied housing units.
- For more information on sampling errors, nonsampling errors, and definitions, visit www.census.gov
